

# FRAMEWORK FOR GAUGING VALVE DISEASE SEVERITY

Alessandro Salustri, MD, PhD  
Heart and Vascular Institute  
Cleveland Clinic Abu Dhabi, U.A.E.

PRACTICE GUIDELINE

# 2014 AHA/ACC Guideline for the Management of Patients With Valvular Heart Disease: Executive Summary

A Report of the American College of Cardiology/American Heart Association  
Task Force on Practice Guidelines

*Developed in Collaboration With the American Association for Thoracic Surgery,  
American Society of Echocardiography, Society for Cardiovascular Angiography and Interventions,  
Society of Cardiovascular Anesthesiologists, and Society of Thoracic Surgeons*

**Writing  
Committee  
Members\***

Rick A. Nishimura, MD, MACC, FAHA,  
*Co-Chair*<sup>†</sup>  
Catherine M. Otto, MD, FACC, FAHA,  
*Co-Chair*<sup>†</sup>

Robert O. Bonow, MD, MACC, FAHA<sup>†</sup>  
Blase A. Carabello, MD, FACC<sup>\*†</sup>  
John P. Erwin III, MD, FACC, FAHA<sup>†</sup>  
Robert A. Guyton, MD, FACC<sup>\*§</sup>  
Patrick T. O'Gara, MD, FACC, FAHA<sup>†</sup>  
Carlos E. Ruiz, MD, PhD, FACC<sup>†</sup>  
Nikolaos J. Skubas, MD, FASE<sup>¶</sup>

Paul Sorajja, MD, FACC, FAHA<sup>#</sup>  
Thoralf M. Sundt III, MD<sup>\* \*\*††</sup>  
James D. Thomas, MD, FASE, FACC, FAHA<sup>††</sup>

\*Writing committee members are required to recuse themselves from voting on sections to which their specific relationships with industry and other entities may apply; see [Appendix 1](#) for recusal information. <sup>†</sup>ACC/AHA representative. <sup>‡</sup>ACC/AHA Task Force on Performance Measures liaison. <sup>§</sup>ACC/AHA Task Force on Practice Guidelines liaison. <sup>¶</sup>Society of Cardiovascular Anesthesiologists representative. <sup>#</sup>Society for Cardiovascular Angiography and Interventions representative. <sup>\*\*</sup>American Association for Thoracic Surgery representative. <sup>††</sup>Society of Thoracic Surgeons representative. <sup>‡‡</sup>American Society of Echocardiography representative.

# CRITERIA OF THE SEVERITY OF VALVE DISEASE

1. Presence/absence of symptoms
2. Severity of VHD
3. Response of the left/right ventricle to the volume/pressure overload
4. Effects on the pulmonary circulation
5. Change in heart rhythm

# STAGES OF PROGRESSION OF VHD

Stage	Definition	Description
<b>A</b>	<b>At risk</b>	Patients with risk factors for development of VHD
<b>B</b>	<b>Progressive</b>	Patients with progressive VHD (mild-to-moderate severity and asymptomatic)
<b>C</b>	<b>Asymptomatic severe</b>	Asymptomatic patients who have the criteria for severe VHD:  C1: Asymptomatic patients with severe VHD in whom the left or right ventricle remains compensated  C2: Asymptomatic patients with severe VHD, with decompensation of the left or right ventricle
<b>D</b>	<b>Symptomatic severe</b>	Patients who have developed symptoms as a result of VHD

# STAGES OF VALVULAR AS

Stage	Definition	Valve Anatomy	Valve Hemodynamics	Hemodynamic Consequences	Symptoms
A	At risk of AS	<ul style="list-style-type: none"> <li>Bicuspid aortic valve or other congenital valve anomaly)</li> <li>Aortic valve sclerosis</li> </ul>	<ul style="list-style-type: none"> <li>Aortic <math>V_{max} &lt; 2</math> m/s</li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>
B	Progressive AS	<ul style="list-style-type: none"> <li>Mild-to-moderate leaflet calcification of a bicuspid or trileaflet valve with some reduction in systolic motion or</li> <li>Rheumatic valve changes with commissural fusion</li> </ul>	<ul style="list-style-type: none"> <li>Mild AS: Aortic <math>V_{max}</math> 2.0–2.9 m/s or mean <math>\Delta P &lt; 20</math> mm Hg</li> <li>Moderate AS: Aortic <math>V_{max}</math> 3.0–3.9 m/s or mean <math>\Delta P</math> 20–39 mm Hg</li> </ul>	<ul style="list-style-type: none"> <li>Early LV diastolic dysfunction may be present</li> <li>Normal LVEF</li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>
C	Asymptomatic severe AS				
C1	Asymptomatic severe AS	<ul style="list-style-type: none"> <li>Severe leaflet calcification or congenital stenosis with severely reduced leaflet opening</li> </ul>	<ul style="list-style-type: none"> <li>Aortic <math>V_{max} &gt; 4</math> m/s or mean <math>\Delta P \geq 40</math> mm Hg</li> <li>AVA typically is <math>\leq 1.0</math> cm<sup>2</sup> (or AVAi <math>\leq 0.6</math> cm<sup>2</sup>/m<sup>2</sup>)</li> <li>Very severe AS is an aortic <math>V_{max} \geq 5</math> m/s or mean <math>\Delta P \geq 60</math> mm Hg</li> </ul>	<ul style="list-style-type: none"> <li>LV diastolic dysfunction</li> <li>Mild LV hypertrophy</li> <li>Normal LVEF</li> </ul>	<ul style="list-style-type: none"> <li>None: Exercise testing is reasonable to confirm symptom status</li> </ul>
C2	Asymptomatic severe AS with LV dysfunction	<ul style="list-style-type: none"> <li>Severe leaflet calcification or congenital stenosis with severely reduced leaflet opening</li> </ul>	<ul style="list-style-type: none"> <li>Aortic <math>V_{max} &gt; 4</math> m/s or mean <math>\Delta P \geq 40</math> mm Hg</li> <li>AVA typically <math>\leq 1.0</math> cm<sup>2</sup> (or AVAi <math>\leq 0.6</math> cm<sup>2</sup>/m<sup>2</sup>)</li> </ul>	<ul style="list-style-type: none"> <li>LVEF <math>&lt; 50\%</math></li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>

# STAGES OF VALVULAR AS

Stage	Definition	Valve Anatomy	Valve Hemodynamics	Hemodynamic Consequences	Symptoms
D	Symptomatic severe AS				
D1	Symptomatic severe high-gradient AS	<ul style="list-style-type: none"> <li>Severe leaflet calcification or congenital stenosis with severely reduced leaflet opening</li> </ul>	<ul style="list-style-type: none"> <li>Aortic <math>V_{max} &gt; 4</math> m/s or mean <math>\Delta P \geq 40</math> mm Hg</li> <li>AVA typically <math>\leq 1.0</math> cm<sup>2</sup> (or AVAI <math>\leq 0.6</math> cm<sup>2</sup>/m<sup>2</sup>) but may be larger with mixed AS/AR</li> </ul>	<ul style="list-style-type: none"> <li>LV diastolic dysfunction</li> <li>LV hypertrophy</li> <li>Pulmonary hypertension may be present</li> </ul>	<ul style="list-style-type: none"> <li>Exertional dyspnea or decreased exercise tolerance</li> <li>Exertional angina</li> <li>Exertional syncope or presyncope</li> </ul>
D2	Symptomatic severe low-flow/low-gradient AS with reduced LVEF	<ul style="list-style-type: none"> <li>Severe leaflet calcification with severely reduced leaflet motion</li> </ul>	<ul style="list-style-type: none"> <li>AVA <math>\leq 1.0</math> cm<sup>2</sup> with resting aortic <math>V_{max} &lt; 4</math> m/s or mean <math>\Delta P &lt; 40</math> mm Hg</li> <li>Dobutamine stress echocardiography shows AVA <math>\leq 1.0</math> cm<sup>2</sup> with <math>V_{max} \geq 4</math> m/s at any flow rate</li> </ul>	<ul style="list-style-type: none"> <li>LV diastolic dysfunction</li> <li>LV hypertrophy</li> <li>LVEF <math>&lt; 50\%</math></li> </ul>	<ul style="list-style-type: none"> <li>HF</li> <li>Angina</li> <li>Syncope or presyncope</li> </ul>
D3	Symptomatic severe low-gradient AS with normal LVEF or paradoxical low-flow severe AS	<ul style="list-style-type: none"> <li>Severe leaflet calcification with severely reduced leaflet motion</li> </ul>	<ul style="list-style-type: none"> <li>AVA <math>\leq 1.0</math> cm<sup>2</sup> with aortic <math>V_{max} &lt; 4</math> m/s or mean <math>\Delta P &lt; 40</math> mm Hg</li> <li>Indexed AVA <math>&lt; 0.6</math> cm<sup>2</sup>/m<sup>2</sup> and</li> <li>Stroke volume index <math>&lt; 35</math> mL/m<sup>2</sup></li> <li>Measured when patient is normotensive (systolic BP <math>&lt; 140</math> mm Hg)</li> </ul>	<ul style="list-style-type: none"> <li>Increased LV relative wall thickness</li> <li>Small LV chamber with low stroke volume</li> <li>Restrictive diastolic filling</li> <li>LVEF <math>\geq 50\%</math></li> </ul>	<ul style="list-style-type: none"> <li>HF</li> <li>Angina</li> <li>Syncope or presyncope</li> </ul>

# STAGES OF CHRONIC AR

Stage	Definition	Valve Anatomy	Valve Hemodynamics	Hemodynamic Consequences	Symptoms
A	At risk of AR	<ul style="list-style-type: none"> <li>Bicuspid aortic valve (or other congenital valve anomaly)</li> <li>Aortic valve sclerosis</li> <li>Diseases of the aortic sinuses or ascending aorta</li> <li>History of rheumatic fever or known rheumatic heart disease</li> <li>IE</li> </ul>	<ul style="list-style-type: none"> <li>AR severity: none or trace</li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>
B	Progressive AR	<ul style="list-style-type: none"> <li>Mild-to-moderate calcification of a trileaflet valve bicuspid aortic valve (or other congenital valve anomaly)</li> <li>Dilated aortic sinuses</li> <li>Rheumatic valve changes</li> <li>Previous IE</li> </ul>	<ul style="list-style-type: none"> <li>Mild AR: <ul style="list-style-type: none"> <li>Jet width &lt;25% of LVOT;</li> <li>Vena contracta &lt;0.3 cm;</li> <li>RVol &lt;30 mL/beat;</li> <li>RF &lt;30%;</li> <li>ERO &lt;0.10 cm<sup>2</sup>;</li> <li>Angiography grade 1+</li> </ul> </li> <li>Moderate AR: <ul style="list-style-type: none"> <li>Jet width 25%–64% of LVOT;</li> <li>Vena contracta 0.3–0.6 cm;</li> <li>RVol 30–59 mL/beat;</li> <li>RF 30%–49%;</li> <li>ERO 0.10–0.29 cm<sup>2</sup>;</li> <li>Angiography grade 2+</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Normal LV systolic function</li> <li>Normal LV volume or mild LV dilation</li> </ul>	<ul style="list-style-type: none"> <li>None</li> </ul>

# STAGES OF CHRONIC AR

Stage	Definition	Valve Anatomy	Valve Hemodynamics	Hemodynamic Consequences	Symptoms
C	<b>Asymptomatic severe AR</b>	<ul style="list-style-type: none"> <li>• Calcific aortic valve disease</li> <li>• Bicuspid valve (or other congenital abnormality)</li> <li>• Dilated aortic sinuses or ascending aorta</li> <li>• Rheumatic valve changes</li> <li>• IE with abnormal leaflet closure or perforation</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Severe AR:</b> <ul style="list-style-type: none"> <li>◦ Jet width <math>\geq 65\%</math> of LVOT;</li> <li>◦ Vena contracta <math>&gt;0.6</math> cm;</li> <li>◦ Holodiastolic flow reversal in the proximal abdominal aorta</li> <li>◦ RVol <math>\geq 60</math> mL/beat;</li> <li>◦ RF <math>\geq 50\%</math>;</li> <li>◦ ERO <math>\geq 0.3</math> cm<sup>2</sup>;</li> <li>◦ Angiography grade 3+ to 4+;</li> <li>◦ In addition, diagnosis of chronic severe AR requires evidence of LV dilation</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• <b>C1:</b> Normal LVEF (<math>\geq 50\%</math>) and mild-to-moderate LV dilation (LVESD <math>\leq 50</math> mm)</li> <li>• <b>C2:</b> Abnormal LV systolic function with depressed LVEF (<math>&lt;50\%</math>) or severe LV dilatation (LVESD <math>&gt;50</math> mm or indexed LVESD <math>&gt;25</math> mm/m<sup>2</sup>)</li> </ul>	<ul style="list-style-type: none"> <li>• None; exercise testing is reasonable to confirm symptom status</li> </ul>

# STAGES OF TR

Stage	Definition	Valve Anatomy	Valve Hemodynamics*	Hemodynamic Consequences	Symptoms
C	Asymptomatic severe TR	<b>Primary</b> <ul style="list-style-type: none"> <li>Flail or grossly distorted leaflets</li> </ul> <b>Functional</b> <ul style="list-style-type: none"> <li>Severe annular dilation (&gt;40 mm or 21 mm/m<sup>2</sup>)</li> <li>Marked leaflet tethering</li> </ul>	<ul style="list-style-type: none"> <li>Central jet area &gt;10.0 cm<sup>2</sup></li> <li>Vena contracta width &gt;0.7 cm</li> <li>CW jet density and contour: dense, triangular with early peak</li> <li>Hepatic vein flow: systolic reversal</li> </ul>	<ul style="list-style-type: none"> <li>RV/RA/IVC dilated with decreased IVC respirophasic variation</li> <li>Elevated RA pressure with "c-V" wave</li> <li>Diastolic interventricular septal flattening may be present</li> </ul>	<ul style="list-style-type: none"> <li>None, or in relation to other left heart or pulmonary/pulmonary vascular disease</li> </ul>
D	Symptomatic severe TR	<b>Primary</b> <ul style="list-style-type: none"> <li>Flail or grossly distorted leaflets</li> </ul> <b>Functional</b> <ul style="list-style-type: none"> <li>Severe annular dilation (&gt;40 mm or &gt;21 mm/m<sup>2</sup>)</li> <li>Marked leaflet tethering</li> </ul>	<ul style="list-style-type: none"> <li>Central jet area &gt;10.0 cm<sup>2</sup></li> <li>Vena contracta width &gt;0.70 cm</li> <li>CW jet density and contour: dense, triangular with early peak</li> <li>Hepatic vein flow: systolic reversal</li> </ul>	<ul style="list-style-type: none"> <li>RV/RA/IVC dilated with decreased IVC respirophasic variation</li> <li>Elevated RA pressure with "c-V" wave</li> <li>Diastolic interventricular septal flattening</li> <li>Reduced RV systolic function in late phase</li> </ul>	<ul style="list-style-type: none"> <li>Fatigue, palpitations, dyspnea, abdominal bloating, anorexia, edema</li> </ul>

# ASYMPTOMATIC VHD WITH NORMAL LVEF

## Frequency of echocardiogram

Stage	Valve Lesion			
Stage	Aortic Stenosis*	Aortic Regurgitation	Mitral Stenosis	Mitral Regurgitation
Progressive (stage B)	Every 3–5 y (mild severity $V_{\max}$ 2.0–2.9 m/s)  Every 1–2 y (moderate severity $V_{\max}$ 3.0–3.9 m/s)	Every 3–5 y (mild severity) Every 1–2 y (moderate severity)	Every 3–5 y (MVA $>1.5$ cm <sup>2</sup> )	Every 3–5 y (mild severity) Every 1–2 y (moderate severity)
Severe (stage C)	Every 6–12 mo ( $V_{\max} \geq 4$ m/s)	Every 6–12 mo Dilating LV: more frequently	Every 1–2 y (MVA 1.0–1.5 cm <sup>2</sup> ) Once every year (MVA $<1.0$ cm <sup>2</sup> )	Every 6–12 mo Dilating LV: more frequently

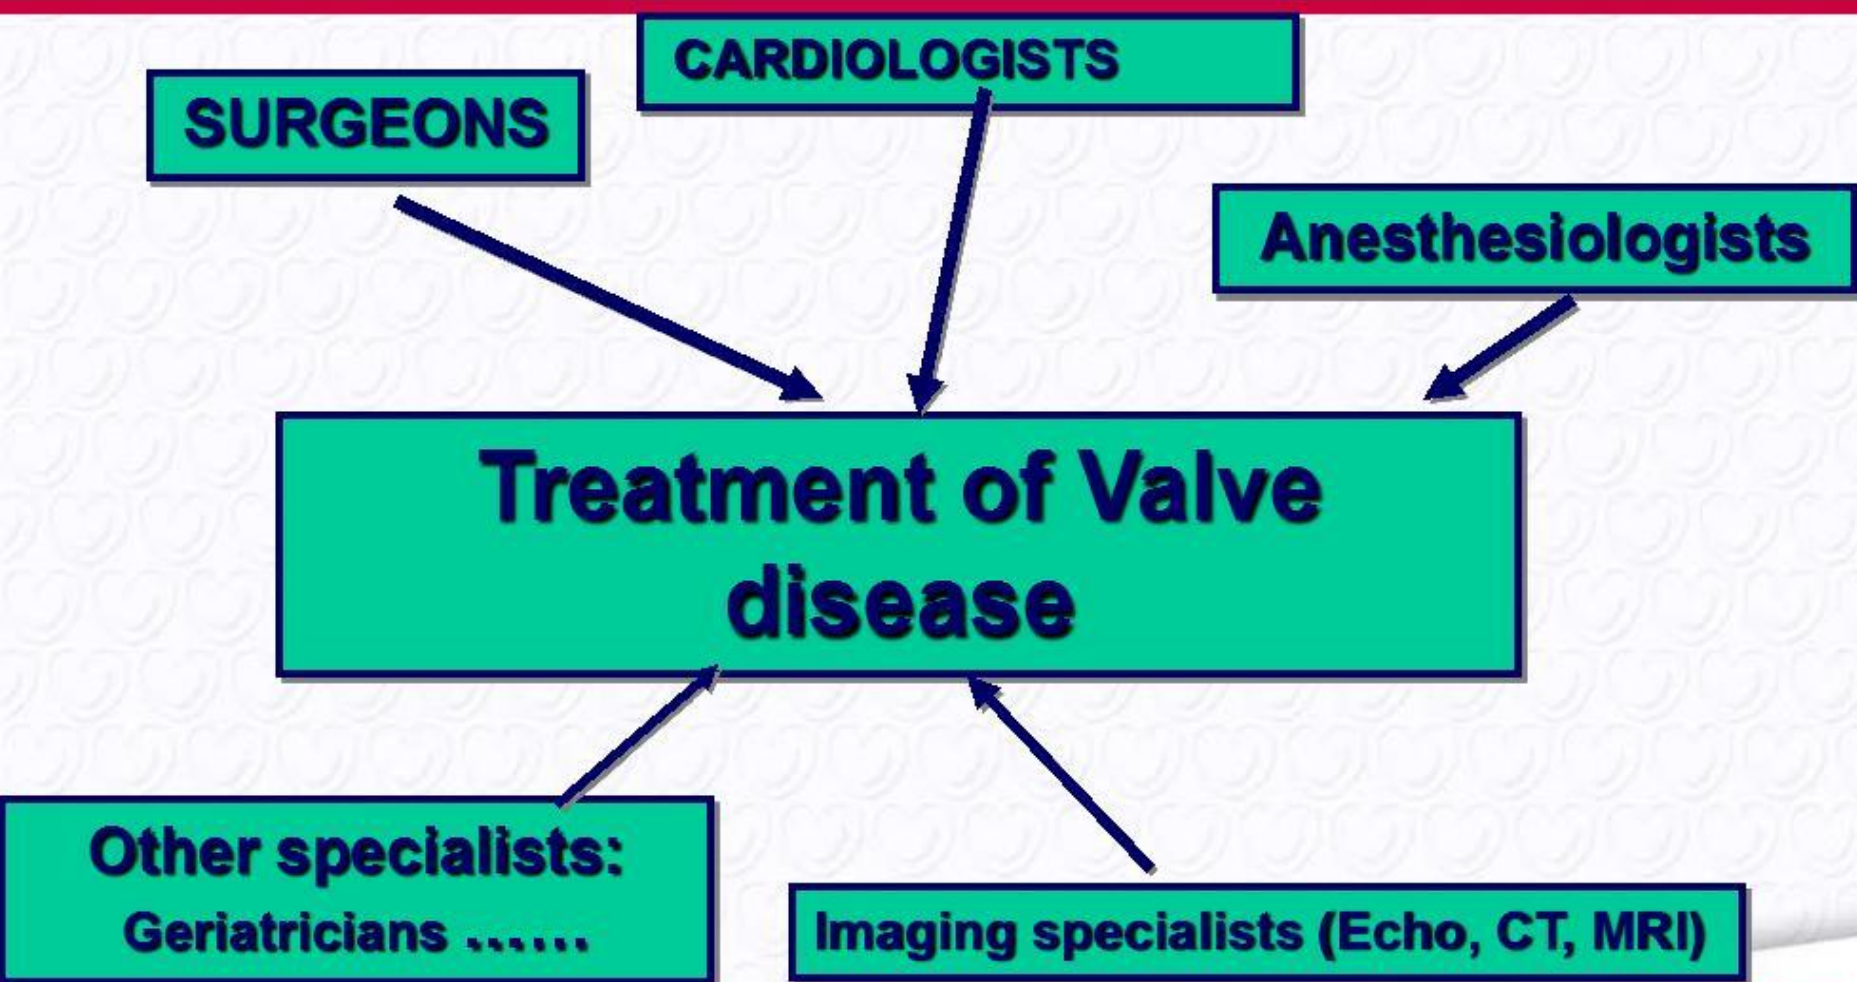

# Essential questions in the evaluation of a patient for valvular intervention

- Is valvular heart disease severe?
- Does the patient have symptoms?
- Are symptoms related to valvular disease?
- What are patient life expectancy and expected quality of life?
- Do the expected benefits of intervention (versus spontaneous outcome) outweigh its risks?
- What are the patient's wishes?
- Are local resources optimal for planned intervention?
