Management of Stable Ischemic Heart Disease

Symptoms of angina refractory to medical therapy

Revascularization with PCI or CABG (Class 1)

LVEF ≤50%

Is the patient a suitable CABG candidate?

Yes

CABG (Class 1)

No

LVEF >50%

Is the patient a suitable CABG candidate?

Yes

CABG (Class 2b)

No

PCI (Class 2b)

Medical therapy

Multivessel coronary artery disease with anatomy suitable for revascularization

Coronary anatomy not suitable for revascularization

Heart team discussion (Class 1)

Medical therapy with or without PCI

Left main stenosis

LM stenosis with complex coronary artery disease and a Syntax score >33

Is the patient a suitable CABG candidate?

Yes

CABG (Class 1)

No

Left main PCI (Class 2a)

Medical therapy with or without PCI

Heart team discussion (Class 1)
