

ACC.18 CPE Sessions

Acute and Stable Ischemic Heart Disease

Learning Objectives:

1. Compare and contrast different STEMI and NSTEMI systems of care and logistical processes for managing complex patients with ACS
2. Formulate a differential diagnosis and management strategy for athletes presenting with ischemic heart disease
3. Scrutinize the methodology of recent ACS clinical trials and existing gaps in current guidelines to determine the implications and generalizability of findings
4. Evaluate the evidence and different perspectives underlying current controversies in ACS management and ACS Guidelines, including international and other societal guidelines
5. Describe the management of complications seen in ischemic coronary heart diseases
6. Integrate the expertise of a multiprofessional and multidisciplinary Heart Team in ischemic heart disease
7. Incorporate cardiac rehab clinical advances and health care payment reform into practice
8. Discuss where sex differences exist in cardiovascular medicine and how to tailor management accordingly
9. Assess and appropriately manage patients with cardiogenic shock or in need of critical care
10. Detect and manage patients with angina refractory to conventional strategies and chest pain assessed in clinic, chest pain/clinical decision units, and inpatient
11. Risk-stratify and tailor the selection of medical management vs. revascularization for individual patients with ischemia, including anticoagulation therapies
12. Identify the diagnosis and management of atypical ischemic heart disease presentations, including endothelial dysfunction, microvascular dysfunction, spontaneous coronary artery dissection, and ischemia without obstructive coronary artery disease

Arrhythmias and Clinical EP

Learning Objectives:

1. Apply recent evidence and current guideline recommendations to the management of arrhythmias
2. Integrate emerging evidence and options for prevention, detection, risk assessment, rhythm and rate management, and stroke prevention into the care of patients with atrial fibrillation
3. Identify patients and patient populations who can benefit from currently available and investigational device-based therapies
4. Recognize and interpret salient ECG patterns and integrate into clinical decision-making
5. Evaluate athletes with heart disease for return to play based on current guidelines.
6. Recognize patients at risk for adverse cardiovascular outcomes due to ventricular arrhythmia; identify candidates for medical or ablation therapy

Congenital Heart Disease

Learning Objectives:

1. Recognize the patient with CHD who should be managed or periodically assessed at a specialized CHD Care Center and which approach (adult, pediatric, and team-based) is appropriate. Formulate plans for transition from pediatric to adult care.
2. Recognize common issues in the management of patients with CHD, including aortic involvement, cardiogenic shock, cardiomyopathies, and single ventricle
3. Identify novel strategies in imaging to effectively evaluate CHD
4. Compare surgical versus interventional approaches to CHD
5. Describe the role of emerging transcatheter therapies and surgical techniques in the management of CHD
6. Establish high-functioning teams and participate in local and national quality improvement initiatives to identify critical gaps as well as potential strategies for better care delivery
7. Explain the structure and applications of multicenter registries, such as IMPACT, to improve patient care in CHD
8. Utilize the latest understanding of exercise in cardiovascular disease with a focus on high risk populations.
9. Incorporate recent advances and research into cardiology practice for congenital heart disease

Heart Failure and Cardiomyopathy

Learning Objectives:

1. Integrate contemporary concepts in the pathophysiology of cardiovascular disease into the diagnosis, evaluation, and management across a broad spectrum of patients with heart failure and cardiomyopathy
2. Offer practical guidance on diet, exercise, social support, and heart failure self-management that is appropriately tailored to diverse patient populations
3. Recognize the implications of sleep apnea, diabetes, chronic kidney disease, oncologic therapies, pregnancy, and additional comorbidities on the epidemiology and management of heart failure
4. Evaluate the role and indications for ICDs, CRTs, hemodynamic sensors, and other cardiac devices for heart failure management
5. Identify patients with heart failure or cardiogenic shock that are appropriate candidates for specific pharmacotherapies, mechanical circulatory support, cardiac transplantation, and/or palliative care
6. Analyze the evidence on new and established pharmacotherapies, devices, and novel therapies for heart failure management
7. Participate in high-functioning teams and refine system processes to improve care quality and outcomes for patients with heart failure
8. Recognize future approaches to heart failure and cardiomyopathy that are being investigated/researched currently
9. Develop insight into the complexities of end-of-life care and care of the frail, elderly heart failure patient.
10. Identify the impact of health care reform on the care of heart failure patients

Invasive CV Angiography and Intervention

Learning Objectives:

1. Monitor and address gaps in quality, appropriateness, reimbursement, and safety in the cardiac catheterization and endovascular labs and participate in meaningful public reporting for revascularization procedures
2. Determine an appropriate adjunctive and long-term antithrombotic regimen for diverse patients with acute coronary syndrome or undergoing a revascularization procedure, and address issues with antiplatelet regimens in patients at high risk for bleeding
3. Interpret and integrate findings from adjunctive coronary and endovascular assessment into clinical decision-making
4. Decide whether and how to revascularize patients who are high-risk or have complex coronary artery disease
5. Evaluate the evidence from clinical trials describing outcomes, recent advances, and expanded applications of transcatheter aortic valve replacement (TAVR)
6. Describe key tactics for preventing and managing interventional complications
7. Appropriately incorporate new and state-of-the-art structural heart and endovascular technologies and techniques into patient care
8. Work effectively as part of a comprehensive care team to manage patients before, during, and after an interventional procedures
9. Apply findings from diagnostic imaging to plan treatment, guide intervention, and gauge procedural outcomes

Learning Objectives:

1. Integrate evidence-based diagnostic testing, and shared decision-making into ASCVD risk assessment and risk factor management
2. Apply current evidence base to determine thresholds for hypertension treatment, establish therapeutic goals, and implement team-based processes to achieve timely blood pressure control and in complex cases
3. Recognize the implications of diabetes on cardiovascular disease and treatment outcomes and tailor management accordingly
4. Evaluate often conflicting recommendations as well as the underlying evidence on dyslipidemia and ASCVD, including dietary and medication recommendations for prevention of disease
5. Discuss recent clinical trials assessing new therapeutics for prevention and management of ASCVD
6. Integrate best practices with regards to lifestyle and dietary recommendations to prevent or manage ASCVD and related diseases, such as diabetes
7. Consider unique factors in prevention and management of ASCVD for vulnerable populations

ACC.18 CPE Sessions

Pulmonary Hypertension and Venous Thromboembolic Disease

Learning Objectives:

1. Evaluate the diagnostic and therapeutic options for patients with pulmonary hypertension and the multiple potential etiologies of pulmonary hypertension
2. Identify innovative translational discoveries and the potential for personalized medicine in PAH
3. Apply current practice and innovative research to the cardiology practice for patient population with VTE
4. Compare and contrast opposing approaches and controversies in the cardiology practice of VTE
5. Determine diagnostic criteria within the spectrum of Pulmonary Hypertension (PH), decisions regarding therapies, and best methods to determine clinical response to treatment

ACC.18 CPE Sessions

Valvular Heart Disease

Learning Objectives:

1. Apply recent updates to guidelines and recommend best practices for valvular care to clinical practice
2. Describe the evidence and controversies associated with recent changes to the classification framework and treatment thresholds outlined in the VHD Guidelines Update
3. Recognize how the mechanism, natural history, diagnosis and treatment options of patients with right- and left-sided valve disease continue to evolve and affect patient care algorithms
4. Assess the role of advanced echo techniques, stress imaging, CT and CMR in characterizing native and prosthetic valvular disease and guiding management
5. Recognize the importance of the heart team approach to treatment of patients with complex VHD whose care may not be well-described by current VHD guidelines
6. Incorporate the evidence on contemporary surgical, percutaneous, and device-based treatment options into clinical decision-making for patients with VHD
7. Compare strategies in assessment, diagnosis and treatment of special populations with valvular heart disease

Vascular Medicine

Learning Objectives:

1. Evaluate the evidence associated with current controversies in the management of pulmonary embolism and deep venous thrombosis
2. Incorporate recent clinical trial findings and evidence-based guideline recommendations into the treatment of patients with vascular disease
3. Assess common vascular medicine complaints and synthesize the history, examination, and appropriate testing to diagnosis “can’t miss” vascular medicine disorders
4. Utilize team-based approach to provide maximally effective Vascular Medicine care
5. Recognize and effectively treat common vascular and thrombotic complications of cancer and cancer-directed therapy
