

How to Use this Course

This course has been created to help cardiac care professionals close the gap in new cardiometabolic pharmacotherapy. Each activity is a stand-alone continuing medical education activity. You do not have to complete more than you would like in order to complete the course. Take what you need when you need it.

To create engaging and interesting activities, there are several new formats for you to try with in this course.

Patient Cases: This icon represents an interactive patient case for you to practice your knowledge and skills regarding new cardiometabolic pharmacotherapies.

Discussion Boards: This icon represents moderated discussion forums where you will be able to interact with faculty on select topics, articles, and an interview about new techniques and patient treatments.

Podcasts: This icon denotes podcasts that you can listen to either from the website or download to listen to later when it is convenient for you. These podcasts discuss SGLT2s and GLP-1 agonists and the benefits they have for your patients.

Expert Analysis: This icon portrays expert analysis videos where our expert faculty discuss the efficacy of new treatments, the challenges of using them in your clinical practice, and how to discuss them with your patients in practice.

Interactive Patient Cases: This icon represents video-based interactive patient cases. A patient will appear on the screen, simulating the clinical environment, and after the patient finishes speaking, a question will come up, and answering the question will advance the patient interaction. Successful completion of this activity will be achieved after passing the posttest and submitting the survey.

Each one of these activities is designed to empower you to improve your skills in patient care and treating cardiometabolic illnesses. Thank you for your participation and engagement with these new formats.
